

VeloLeads User Guide

Automated Lead Finder & Google Maps Scraper

IMPORTANT NOTICE:

1. You **must extract the ZIP file** completely before running the application. Do not run it from inside the ZIP view.
2. **Copy the license key** once you have made the payment to activate the software.

1. Easy Installation

VeloLeads is packaged as a standalone application. There is **no need to install Python** or configure environment variables.

- **Extract files:** Extract the contents of the ZIP folder onto your computer.
- **Run the App (Windows):** Double-click the **VeloLeads.exe** file to start the application.
- **macOS Support:** Under maintenance, **coming soon in a few days**.
- **Auto-Setup:** On the first launch, the app automatically configures itself and installs background browser dependencies. This requires an active internet connection and takes about 30 seconds.

2. Activation & Licensing

When the app starts for the first time, you will see the Activation Screen:

1. Enter your registered **Username / Email Address**.
2. Paste your 16-character **License Key**.
3. Click **Activate License**. The application will connect online to verify and register your device.

3. How to Scrape Leads

The primary dashboard is the ****Scraper**** panel. Follow these simple steps to find new leads:

Form Field	What to Enter
Locations	List of cities or regions separated by commas (e.g. Hyderabad, Bangalore).
Niche / Keywords	Target business categories or keywords (e.g. Restaurants, Plumbers, Gyms).
Extra Info Filters	Define quality criteria (e.g. min rating 4.0, minimum 20 reviews).
Target Emails	Enter recipient emails to automatically send the finished Excel reports.
Leads per Query	Enter target limit (e.g., 50) to control how many leads are extracted.

Running a Search Campaign

1. Click **Start Scraping** →. The app will search Google Maps and visit business websites to extract contact info (phone numbers, addresses, emails).
2. Monitor the real-time progress, charts, and details inside the **What's happening?** log window on the right side of the screen.
3. Once scraping finishes, the leads are written to your local database and emailed as a spreadsheet report.

4. Viewing and Managing Reports

All compiled campaigns are saved under the ****Reports**** tab. Select any report and click **Open File** to view the Excel sheet instantly in Microsoft Excel, or click **Delete** to remove unwanted records.

5. Troubleshooting Quick Check

- **App closes immediately:** Make sure you extracted all files from the ZIP before running. Do not run it directly inside the ZIP view.
- **Connection Errors:** Verify your internet connection. A connection is required for online license verification and scraping.
- **No Emails Sent:** Check your config.json file. Ensure your sender SMTP details and receiver email lists are correctly written.
